## Cyberattacks

Did you know that 75% of cyberattacks start with an email? Always protect yourself by keeping your eyes open for emails that are unsolicited or don't look quite right. If the email contains

spelling errors, requests personal information, asks you to click a link or attachment, or advises you that you've won a prize, you should proceed with caution. It's better to contact the sender directly by phone or on their official web site to verify that the email is legitimate before you put your private information in jeopardy by falling for a phishing attack.
