

## IRRIGATION DIVISION

### FLOWERS, VEGETABLE POTS, PLANTERS AND WINDOW BOXES

In these stressful times of much uncertainty we are offering you an alternative to relieve stress by having vegetables produced via pots and flowers to brighten your day and surroundings. Now you can have it and at the same time when the sprinkler system is winterized the drip system which provides water will be cleaned out to avoid freezing.

#### THE PROCESS:

We will order the large flowerpots, the pots should be at least 5 feet tall to allow for deep root growth to achieve the kind of vegetable produce you will want. A separate wheel carriage will be ordered to move the pots around as needed. Trellises will then be added to the flowerpots so that the vegetables will have support for the high growth that will result and to hold the plant up as they bear. Also, flowers can be planted along with the vegetables along the rim of the pots or in separate pots. We can plant flowerpots, and hang as planters or we can install window boxes and plant the flowers.

#### WATERING AND IRRIGATION:

We only use potted soil and fertilizer. A drip irrigation is added to the pots, planters and window boxes along with a timer which will time the watering process as needed. If there is already an existing irrigation system the flower and vegetable pots can be timed on its separate program.

Here are some pictures so that you can get an idea what it will look like.
