

Portable 2-Way Radios

2-Way Radios Help Speed Vaccine Relief.

Vaccine locations are literally popping up in hospital and drug store parking lots and other venues across the globe.

These locations are utilizing reliable business band 2-way radios to keep the process of COVID vaccine delivery running at warp speed. Wireless business band portable 2-way radios, fixed-location battery powered callboxes, and even wireless PA systems provide mass notification capability for crowd control, instant communication to security, administration, and even inventory replenishment personnel. The systems are stand alone, so installation is extremely simple and FAST. No other infrastructure is required.

The fast and efficient delivery of the vaccine is now an imperative. Cost-effective, license-free MURS business band 2-way radio products can help make this happen. License-required VHF and UHF models also available. A variety of innovative products provide instant, wireless voice communication inside buildings and around the complex.

Typical range 1 to 2 miles (line-of-sight) no obstructions.

Desktop 2-Way Intercom

AC powered. Always On, Always Ready, Always There!

2-Way Radio Callboxes
