

## **INSTALLING RITRON PRODUCT PROGRAMMING SOFTWARE**

The files available on the Internet are "executable zipped" versions of our installation disks.

Except for the RTU programmer, Ritron programming software requires that you enter a valid Software Serial Number (SSN). This was provided to you with your original copy of the software and is displayed on the first screen of the program. Before you install the new software, write this number down! You will be asked to enter this number when you run the new software for the first time.

Here are step by step instructions for RPT-PCPS-3.0R20 :

- Download the Ritron file from the internet to a known location on your computer.
- Run this file as a program. The file is self-executable. It will expand into all the necessary installation files.
- The installation program will begin automatically.
- Follow the instructions given by the installation program.

Here are step by step instructions for RPT-PCPS-3.05 :

- Create a directory on your hard drive called "\\tmp".
- Download the Ritron file from the internet to the "\\tmp" folder.

- **Run this file as a program. It will expand into all the necessary installation files.**
- **Copy all the files in \tmp to a blank diskette.**
- **Run the program on the diskette using "a:install".**
- **Follow the instructions given by the installation program**

**Our Customer Service Department will be glad to help you if you have any questions.**
